Otter Handins

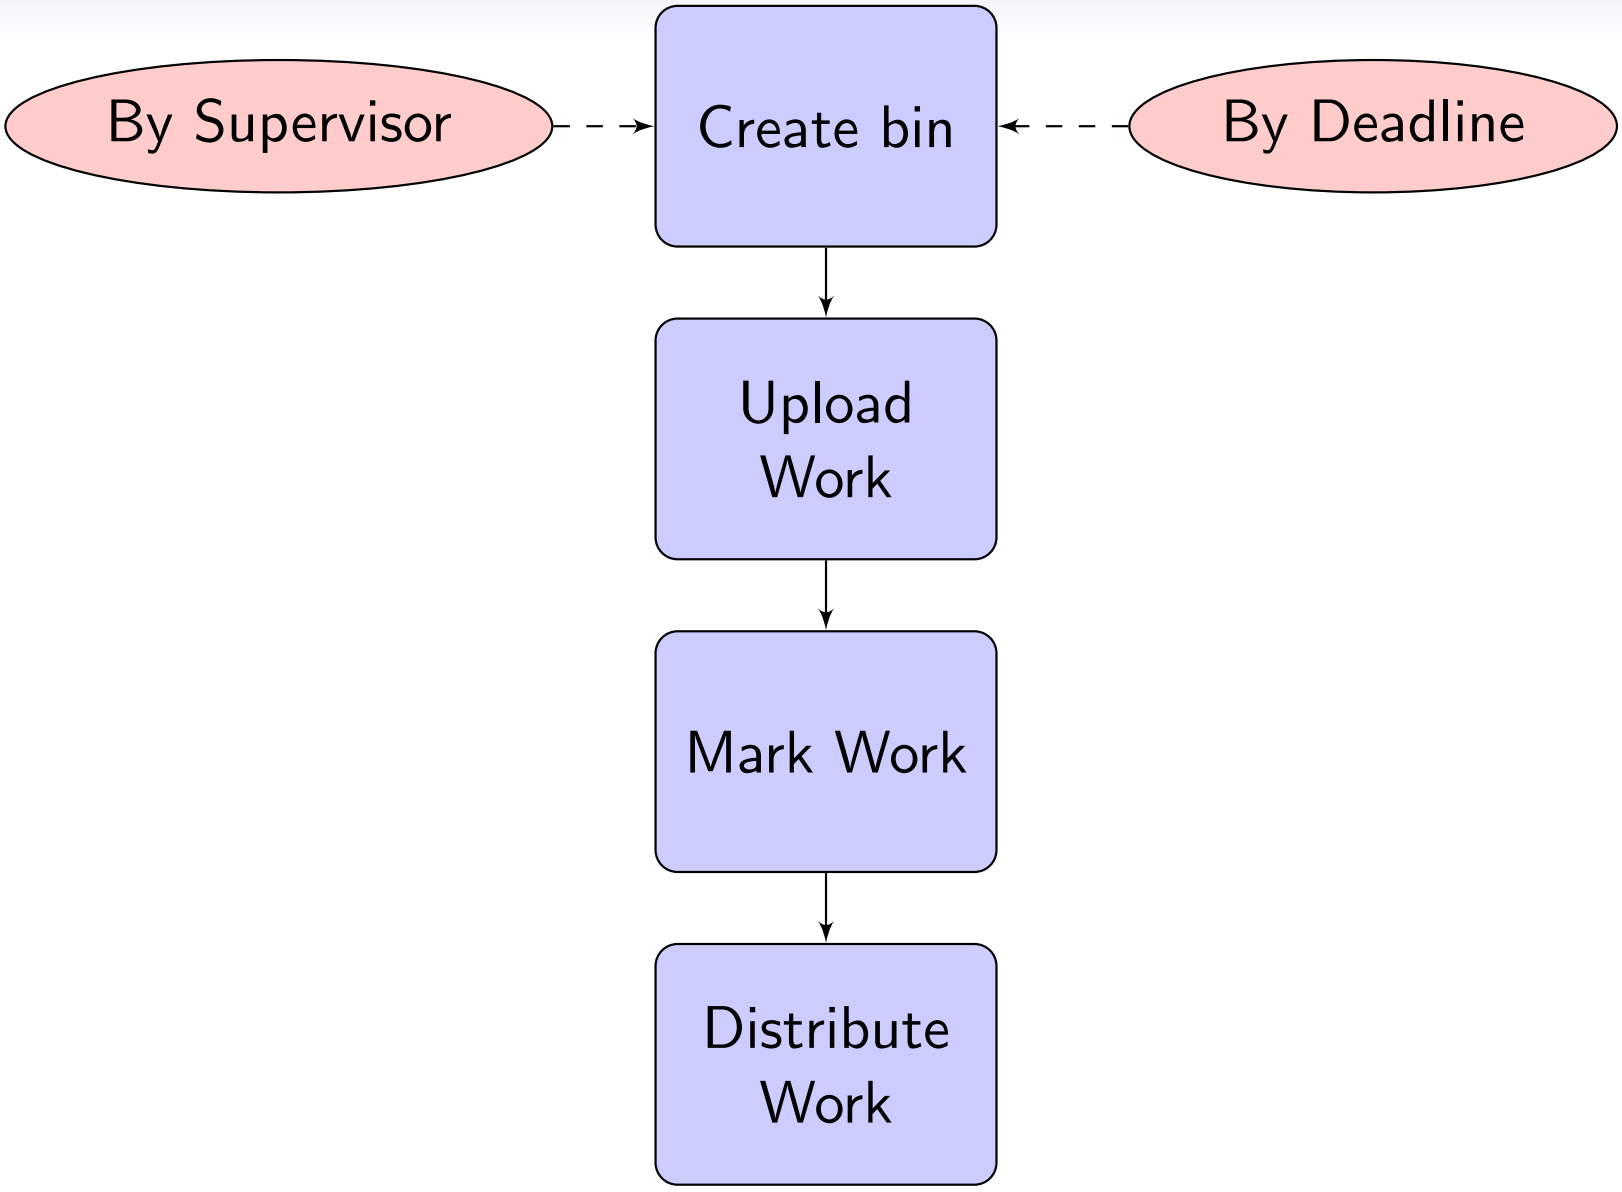
Supervising tool to organize, mark and store work

Managing supervisions is hard

- Hard to organize and print the work from the students
- Work might not be submitted on time or in a good format
- Parts of the work might get lost or overlooked
- No easy way for a DoS to look at a student's work

Our approach

- A bin is a place where students can throw in a supervision's work
- Convert different work formats automatically to PDF
- Work is easily accessible anywhere, anytime, forever



By Supervisor
Create bin
By Deadline
Upload Work
Mark Work
Distribute Work

What it means for the student...

- Submit work as either PDF, Text or scanned images
- Students may select questions on their work
  - Automatically using some special markup for the ones that are computer readable (PDF, Text)
  - Manually using a web interface we provide

CamScanner

a) 1. Every node is either red
2. The root is black
3. All leaves are black
4. If a node is red
5. For each node, any
contains the same number

a) 1. Every node is either
2. The root is black
3. All leaves are black
4. If a node is red
5. For each node,
contains the same num

...and for the supervisor

- We provide PDFs with the work filter by student or by question
- PDFs can be annotated with Xournal or other tools
- We detect and store the changes on the PDFs.

New ways to improve the supervision

- Students can review their marked work before the supervision.
- Peer marking.

Thank You
